Python Open Lab – 5

Files - practise questions with exception handling

1. Consider a student record containing Name, Roll No, Branch, Year, CGPA. Write a menu driven program to create n records in a file, display the records and update a record. To be implemented using functions.
2. Capitalize the first letter of every word in a file.
3. Using functions, reverse every word in a file and print the resultant text in another file
4. Merge alternative lines from two files and print the result in another file.
